## Barbie dream house games

Photo: Shutterstock If you build a house from scratch or even add your current home, you are in a unique position to be able to install systems and components that would be difficult to integrate into existing structures. From fun nirvana to bath bliss, now is the time to get things right so that your home becomes a vein of fun, comfort and ease.1. EVEN HOUSE SOUND SYSTEM If you're like most of us, you have different speakers all over the home – some bluetooth, some wired, some require an amplifier, some that need to be recharged or occasionally change batteries. Cut the chiphony and wire the home for sound. One of the hardest parts of putting in a full-native sound system is cutting ceilings and walls to run wires and installing speakers, but if you're still in the construction phase, this part is a breeze. Working with your home's wire kit for sound is one of the easiest routes to go. The kit usually contains a base station and a series of control panels that can be placed in rooms around the home. This allows you to create different zones in your house to which you can send different music streams. When you select a base station, you'll want to select speakers that inhale into walls or ceilings and connect them to the station. Those with shiftable tweeters give you network sound exactly where you want it, while speakers with built-in bass and treble control give you networking sound for each room. When starting the speaker wire through the home, be sure to use the UL-rated speaker wire marked CL2 or CL3. Photo: Warmboard2. RADIANT FLOOR HEATING When it comes to feeling modern, comfortable and eco-wise at once, it is difficult to beat the shiny underfloor heating. Mounted on the floor or floor, radiant floor heating panels usually use channels of heated water that place heat on the floor above them. The result is wonderful, after all the heat, which has no allergic worry of forced hot air or any of the uneasy problems with heating and noise, which is often associated with radiators or electrical base systems. One of today's smart decisions for radiant underfloor heating is Warmboard, because they make panels that are super conductive, which means that more heat from the water flowing through the canals is transferred directly to your home. Increased conductivity also means less heat loss, which makes the system extremely efficient, and that Warmboard is also very restrictive, heating and cooling faster than other systems when you change the temperature on your thermostat.3. SPA BATH The bathroom can be a simple utilitarian space or with a little planning it becomes one of the most luxurious retreats in your home. When designing the bathroom, you should leave enough room for a shower and bath and strengthen the floor under the floor so that you can install a heavy hot tub. These days you can buy all-in-one units containing a massage-jet several shower heads and steam and sauna functions – and a computer that can control them. Moisture-resistant TVs can also be installed in the walls of the shower or bathtub, so you won't miss any news or sports action. If this is all too extreme for you, consider installing a remote shower or bathtub that allows you to warm up before you even get out of bed. Related: 10 waterproof shower body accessories4. HOME AUTOMATION There are several options for home automation systems that do everything from light control to warning when doors or windows are open, or even when there could be a fire or flood. There are thermostats that learn from your heating and cooling patterns and can be controlled via smartphone. There are speakers that can also be phone controlled and you can play different tunes throughout your house. And at least one company makes a hub that can bind it all together. While it's easy to install home automation equipment in an existing home while you're still building, you'll get everything exactly where you need it before you take control of your smartphone and pilot your house, such as Starship Enterprise.Photo: Kalamazoo Kitchens5. OUTDOOR KITCHEN There was a time when the homes had summer kitchens – separate buildings where food was prepared in the warmer months to keep the heat out of the main living areas. Although summer kitchens are a thing of the past, the logic remains: cooking outside keeps you from turning on the oven when the weather feels like the oven itself. When planning your outdoor kitchen, remember that you will want to have easy access to utility plumbing services in line for the sink, runoff and gas line if your home has a natural gas service (otherwise, you'll start your barbecue and hob off propane, so make sure you build in the storage room of the tank). While you can build your own open-air kitchen out of stone, into which it is possible to set the sink and cooking areas, it is more affordable to build a structure made of wood and face a stone veneer that will be weather-insulated and create an equally attractive look. This article brought you warmboard. His facts and opinions are facts BobVila.com. Come on, Barbie, let's go... Shopping! For this year's 50th birthday, corporate parent Mattel wrapped up one gift: Barbie's first flagship store. The six-story, 35,000-square-foot Barbie house in Shanghai, designed by New York's Slade Architecture, is the first physical presentation of the new Barbie chapter, says Richard Dickson, senior vice president of the brand. It's a time project. Since U.S. sales have been shut down in recent years, Mattel hopes barbie will fly out in emerging markets like China, where there's a really fresh face. The design of the retail space reflects her ambition to be more than a game - Barbie House also has clothes, a beauty salon and a café. Mattel to raise the experience to the level of parade trade, as opposed to flagship child trafficking, says architect James Slade. Message: Living in plastic? It's fantastic. This site is not available in your country Everyone knows mom's household rules, and there are actual data to back up this conventional wisdom. Author Tom Peters said in his 2001 study that Women's American Women account for 83 percent of consumer spending and have control over the choice of 91 percent of all new homes. However, most of the apartments designed and built mostly by men do not meet the proper needs of this powerful block, according to the focus group we have convened - a dozen suburban women ranging in age from 30 to 50 years old. Mostly moms, some work and some staying at home, helped plan our last showhouse, in Westport, Connecticut. To make the 7,200-square-foot, five-bedroom project, which is focused on the women's charitable component, we embodied the local chapter of Susan G. Komen for the drug: Proceeds from house views were given to help further fight breast cancer. Click here to look for an entire photo gallery. The first floor plan first floor is divided into two basic zones - one dedicated to formal life and the other into an informal one. Mudroom, children's playroom - home room, main laundry, kitchen, butler's store, dining room, and family room extend to the back of the house; entrance, living room and dining room are at the front. This master suite is located in a separate wing from the children's bedrooms and bathrooms. At the request of our focus group, we included a secondary laundromat and a side staircase leading to the mudroom area. The babysitter's apartment (or mother-in-law) occupies the area above the three-car garage. Essex cabinets with custom charcoal glaze over nordic white finish. Wood mode; 877-635-7500, woodmode.com. KitchenAid; 800-422-1230, kitchenaid.com. SINKS Culinaire undermount double bowl (main sink) and undermount island model. U.S. Standard; 800-422-1902, americanstandard-us.com. WINDOWS Wood with custom hybrid externalization and simulated distributed light. Jeld-Wen Windows & Doors; 800-535-3936, jeld-wen.com. We asked the panel what they love and hate about current houses, and what they would do if they could just order the home of their dreams. They said that while they spend most of their time in the family room and kitchen, these spaces are not comfortable for all the activities that happen there. Participants agreed that they wanted an open plan with plenty of natural light, but in addition, their wish lists were entangled with ideas intended for storage and other practical matters: for example, for sending mail; where to wash the dog; and how to stay connected to your family while cooking, paying bills and countless other tasks. We signed up local architect Robert Storm and built coastal construction to build a home that would be traditional on the outside and full of modern amenities inside – just what women demanded. The colonial-style property, on a 2.2-hectare lot, has classic stakes and finishing works such as wide plank walnut floors and white painted mold and mill. The layout is free movement, so the room decor had to blend in well. The themed is something in the house that makes you feel like close to the water, says interior designer Skye Kirby of Norwalk, Lillian August Home Furnishings & Interior Design based in Connecticut. The nautical features of the beach house had modern threads. I wanted the interior to be fashion forward, he says, so I included hot samples like a zebra in a few areas. Greenwich, Connecticut-based kitchen designer Karen Berkemeyer of ceramic design has kept a great place to cook and eat simple and elegant. It's the look of the cottage, reminiscent of the 1920s, says of the creamy cabinets for inhaled panels and ceramic tiles with tiles on the subway. It's never going to come out of style. The build for october 2007 marks the 23rd annual observation of Breast Cancer Awareness Month – an appropriate moment to find that, although much progress has been made, the American Cancer Society estimates that approximately 178,500 new cases of invasive breast cancer will be diagnosed among women in the United States this year. At komen.org, the website of Susan G. Komen for the Cure, our partner in this project Westport, Connecticut, we raised \$40,000 for this essential cause. Information on early detection, up-to-date screening methods and patient and survivors support groups is also available through this online resource.
